

```

#include<iostream>
using namespace std;
class add
{
    int x,y;
public :
    void input();
    void display();
};
void add :: input()
{
    cout<<"enter the values of x ";
    cin>>x;
    cout<<"enter the value of y";
    cin>>y;
}
void add :: display()
{
    cout<<"sum of two numbers = "<<x+y;

}

int main()
{
    add a;
    a.input();
    a.display();
    return 0;
}

```

```

enter the values of x 5
enter the value of y 6
sum of two numbers = 11
[Program finished]

```
