

```

#include<iostream>
using namespace std;
class p
{
    int x=4;
    public:
    void getdata1()
    {
        cout<<"x value is "<<x;
    }
};
class C:public p
{
    int y=5;
    public:
    void getdata()
    {
        cout<<"y value is "<<y;
    }
};
int main()
{
    C c;
    c.getdata();
    c.getdata1();
    return 0;
}

```

```

y value is 5x value is 4
[Program finished]

```
