

```

#include<iostream>
using namespace std;
class programming
{
    string x="cpp";
    public:
        programming();
        programming(string);
        void display();
};
programming::programming()
{
    cout<<"i love programming language";
}
programming::programming(string x)
{
    cout<<"i love "<<x<<endl;
}
void programming::display()
{
    cout<<x<<endl;
}
int main()
{
    programming p1(),p2("programming language");
    //p1.display();
    p2.display();
    return 0;
}

```

```

i love programming language
cpp
[Program finished]

```
